

Technical Data Sheet

LH0075

Low Density Polyethylene

LH0075 is a high molecular weight low density polyethylene film grade combining good flexible extrusion behavior and superior mechanical properties. Film made from LH0075 exhibits high dart impact combined with excellent yield and tensile strength and high stiffness. It can be processed on automatic machines. It possesses good dimensional stability. LH0075 is chiefly recommended for extrusion of blown film. It is suitable for shrink film having a high resistance to hole formation and high degree of shrinkage on cooling. LH0075 contains antioxidant.

Applications

- Carrier bags
- Shrink film
- Industrial film
- Dust bin liners
- Large bottles
- Blow molding of small containers
- Packaging of pharmaceutical products
